

## AWS Application Delivery Case Study

# Build and Support Mobile Applications for Customers

### About DGDean

**DGDean** takes well-funded businesses from startup to \$100MM. By leveraging the power of the cloud and some brilliant minds in the tech and design industry, they get businesses to market with the right product at the right time.

#### THE CHALLENGE

- Need to quickly spin up IT services for clients
- Need infrastructure on-demand to support new web and mobile applications
- Need low cost cloud-hosting services and rapid scaling of services to meet unpredictable growth

#### THE SOLUTION

- Amazon AWS with scalable compute and storage services to host components of clients' mobile and web applications
- Avi Networks elastic, centrally managed load balancing platform for rapid scaling of application services

#### BENEFITS / OUTCOMES

On-demand Infrastructure	Fast time to market	Elastic scale
Able to focus on clients instead of standing up data center facilities. Opex pricing.	Application delivery for customer mobile applications in short time with turnkey tools in the cloud	AWS Elastic Beanstalk helps to scale services quickly when there are unpredictable peaks

#### ABOUT AVI NETWORKS AND AWS

Avi Networks completes enterprises' digital transformation with its smart load balancer and modern application services. The Avi Vantage Platform can be deployed across data centers and clouds, delivering better elasticity, intelligence, and cost savings for application delivery.

Amazon Web Services provides a broad platform of secure, cost-effective, high-performance cloud services that help you collect, store, process, and analyze Big Data workloads
