

Fortune 100 Tech. Company Enables Application-Delivery-as-a-Service

“Simplification via Intelligent Automation” for Application Services

PROBLEM

- “Appliance sprawl” leading to exploding complexity and cost with physical and virtual appliances
- Long troubleshooting times due to zero visibility into app analytics
- Multicloud operational complexity delays application delivery

WHY AVI

- Single point of control for all apps across environments
- Granular visibility into application performance and traffic
- Ability to automate application delivery in private and hybrid cloud environments

RESULTS

- Real-time, visual and actionable analytics reduced troubleshooting time from months to minutes
- Integration with VMware and OpenStack quickened application rollout
- Moved away from a disparate management to a single point of control
