

Fortune 100 Technology Company Delivers Analytics-as-a-Service

Deployed on Openstack, Avi Empowers Mobility Customers with Cloud-based Analytics

PROBLEM

- Inability to meet customer and partner SLAs due to operational complexity
- Lack of real-time visibility into application usage
- Complex onboarding and scaling customers slows down application delivery

WHY AVI

- A software-defined solution with single point of control
- Native integration with OpenStack for accelerated app rollouts
- Application services beyond load balancing such as app security, real-time visibility and app monitoring

RESULTS

- Automated application delivery to exceed customer and partner SLAs
- Eliminated server overprovisioning to lower opex by 80%
- Single point of control for users, infrastructure, and apps simplifies customer and partner onboarding
