Global Banking Corporation Delivers Fully Automated Application Services

Avi Aligns With Paas Objectives With Application-Delivery-as-a-Service Goals

PROBLEM

- Inability to automate and deliver an agile, programmable web platform
- Existing appliance-based load balancers does not align with self-service goals
- Lack of APIs for platform orchestration

WHY AVI

- Distributed load balancers with centralized declarative management
- Monitor application health for load balancing and failover decisions
- Achieve programmability with an API-first development approach

RESULTS

- Eliminated overprovisioning with predictive autoscaling
- Enabled application owners and operations teams with self-service
- Eliminated the need to provide proprietary hardware
- Removed hardware provisioning from engineering certification and operational lifecycles
