

Local Government Agency Delivers Online Student Safety Application

Avi Secures, Simplifies and Streamlines Infrastructure for Application Delivery

PROBLEM

- Inability to define application whitelists/blacklists for students
- Frequent app outages due to the inability to scale for peak usage
- Extended troubleshooting time stemming from zero visibility into application and traffic performance

WHY AVI

- Single load balancer to manage application traffic for internal and external applications
- A software-based solution that can elastically scale
- Reduce infrastructure costs by removing the need to overprovision server capacity

RESULTS

- Increased online student safety by preventing unsolicited search results
- Granular visibility into application performance, traffic, and usage
- Predictive autoscaling eliminated application outages
