

Media Services Giant Deploys Avi on OpenStack

100% Rest API, Self-Service and Elastic ADC Accelerates App Development

PROBLEM

- Application deployments slowed down by appliance-based ADCs
- Developers wanted do-it-yourself load-balancing
- Dynamic autoscaling of resources to match growing traffic needs
- Reduce total cost of ADC infrastructure ownership

WHY AVI

- LBaaS for multi-location, OpenStack-Kilo-based private cloud
- Elastic load balancing with security and application analytics
- Software-only solution with native integration with OpenStack and automation tools like Puppet and Chef

RESULTS

- Reduced ADC provisioning time from weeks to minutes
- Developers quickly troubleshoot performance issues from a single OpenStack dashboard
- Achieved 45% savings in OPEX over appliance-based, legacy ADC solution
