

Top 3 Telecom and Media Company Solves Multicloud Application Delivery

Simplifies Multicloud Application Delivery With a Single ADC Solution

PROBLEM

- Existing ADCs with disparate points of control were difficult to manage
- No visibility, performance monitoring, or application insights
- Existing appliance-based ADCs did not support automation
- No support for multicloud environments

WHY AVI

- Software-defined solution that eliminates the need for proprietary hardware
- Enables service delivery without affecting core performance
- API-driven solution that supports multicloud environments without custom configurations

RESULTS

- Modern load-balancing capabilities for less than the cost of annual maintenance with legacy solution
- Predictive, elastic scaling of load balancers eliminated overprovisioning
- Consistent architecture across multiple cloud environments
